

Addendum Concerning Liberty Election System

Once the Board of Elections in the City of New York was made aware that the court had ordered the State Board to authorize the Liberty Election Systems' LibertyMark device, the Evaluation Team contacted Liberty. The team learned that the currently proposed system will not meet the language requirements of the City of New York.

In addition, the paper-faced system supports only one E.D. per unit. The Board of Elections in the City of New York would require approximately 6,100 of these units, compared to approximately 1,800 units of the ES&S, Premier, or Sequoia solutions.

Consequently, the evaluation team did not further investigate the Liberty's proposal.
